FOR IMMEDIATE RELEASE**Fujitsu LifeBook P5010 Gets Linux Graphics Support**

Xi Graphics, Inc. releases Summit graphics drivers for new notebook

DENVER, September 25, 2003 ---- Xi Graphics, Inc. announced today that it has released commercial-off-the-shelf Accelerated-X™ Summit v2.2 graphics drivers for the Fujitsu notebook running Linux or Solaris (on Intel). A total of eight drivers are available for both Linux and Solaris (on Intel), including OpenGL drivers.

The Fujitsu P5010 notebook employs the Intel® i855GM North Bridge chip with integrated Intel "Extreme Graphics 2" that can use up to 64 MB of the computer's RAM memory. The i855GM chip supports a 10.5" LCD display that provides a resolution of 1280x768 pixels. Graphics performance figures for both 2D and OpenGL 3D rendering on the P5010 are available on Xi Graphics' Web site - www.xig.com.

Each Summit v2.2 graphics driver is available in demo mode for download from the Xi Graphics Web site for compatibility and performance testing. Users can purchase a Summit License Key on-line which, when installed, converts a demo into permanent product. A license is required for each computer on which an Accelerated-X Summit driver is used as permanent product. Prices for the Summit Laptop License Keys start at \$69. Quantity discounts are available.

Customer support, which the Company claims is prompt, courteous and competent, is also free via phone and e-mail to its Denver, Colorado facilities.

About Xi Graphics, Inc.

Xi Graphics, Inc. has developed commercial accelerated graphics drivers and X servers for the X Window System on Linux and UNIX® systems since 1994. For information on the Company, visit www.xig.com.
