FOR IMMEDIATE RELEASE**Xentera GT Graphics Cards Get Solaris & Linux Graphics Support**

Xi Graphics, Inc. releases Summit graphics drivers for Colorgraphic multi-screen series

DENVER, February 11, 2004 ---- Xi Graphics, Inc. announced today that it has released commercial-off-the-shelf Linux and Solaris (on Intel) graphics drivers to support the new Xentera GT multi-screen series of graphics cards from Colorgraphic Communications Inc. that employ the ATI MOBILITY® RADEON® 9000 Graphics Processing Unit. Five models of the Xentera cards are available, with two, four, or eight ports for driving two, four or eight displays per card, and either PCI or AGP connector configuration (except for the 8-port model, which comes only in PCI format).

The new software support was developed by Xi Graphics with the cooperation of ATI Technologies Inc. and Colorgraphic. Full-function demos of Summit v2.2 Series of X servers and graphics drivers for use with the X Window System (used by UNIX and UNIX-like operating systems) are available for free downloading and testing from Xi Graphics' Web site. License Keys to convert the Summit v2.2 demos to permanent product can be purchased on-line or through other normal purchasing modes.

Summit v2.2 products support Linux releases from RedHat, S.u.S.E., Mandrake, Slackware, etc., as well as versions 8 and 9 of Solaris (on Intel). All of the Xentera GT cards are supported by Xi Graphics' Summit Multi-head (MX) Series. In addition, the Xentera GT 2 is also supported by the Summit Desktop (DX) Series.

Colorgraphic cards and Xi Graphics Multi-head display drivers are used for multi-screen displays in banking, industrial & military command/control rooms, public display walls, training simulators, etc.

A license is required for each computer on which an Accelerated-X Summit driver is used as permanent product. Prices for Summit Series License Keys range from \$39 for the DX Series drivers and from \$129 for the MX Series drivers. Quantity discounts are available.

Customer support, which the Company claims is prompt, courteous and competent, is also free via phone and e-mail to its Denver, Colorado facilities.

About Xi Graphics, Inc.

Xi Graphics, Inc. has developed commercial accelerated graphics drivers and X servers for the X Window System on Linux and UNIX® systems since 1994. For information on the Company, visit www.xig.com.
