**FOR IMMEDIATE RELEASE****Linux, Solaris Graphics Drivers Available for ATI RADEON™ IGP™ Notebooks**

*Xi Graphics, Inc. releases set of drivers for RADEON IGP 340M graphics*

DENVER, May 12, 2003 ---- Xi Graphics, Inc. announced today that it has released commercial-off-the-shelf Linux and Solaris (on Intel) graphics drivers for the ATI RADEON IGP 340M notebook graphics chip with the cooperation of ATI. The RADEON IGP 340M graphics processors are integrated with the 'Northbridge' and are used in notebooks manufactured by HP, IBM, Fujitsu, NEC, Legend, MicronPC, Packard Bell, etc.

The new software is available in Xi Graphics' Summit LX Series of X servers and graphics drivers for use with the X Window System used by UNIX and UNIX-like operating systems. Four drivers are available each for Linux and Solaris (on Intel), including high-performance OpenGL drivers, for notebooks that use this graphics chip. The full-function drivers can be downloaded in demo form for free from Xi Graphics' FTP site for testing, and can be licensed online.

The RADEON IGP notebook drivers have been tested with Solaris (on Intel) version 9, and with the Linux 2.4.18 (and above) kernel now shipped with various Linux distributions (including RedHat 9, Mandrake 9.1, and S.u.S.E. 8).

A license is required for each computer on which an Accelerated-X Summit driver is used as permanent product. Prices for the Summit Laptop License Keys range from \$99, depending upon the driver. Quantity discounts are available.

Customer support, which the Company claims is prompt, courteous and competent, is also free via phone and e-mail to its Denver, Colorado facilities.

#### About Xi Graphics, Inc.

Xi Graphics, Inc. has developed commercial accelerated graphics drivers and X servers for the X Window System on Linux and UNIX® systems since 1994. For information on the Company, visit [www.xig.com](http://www.xig.com).
